30 YEARS OF EXCELLENCE

Founded in 1983, Pharmascience is a leading manufacturer of generic drugs in a wide range of therapeutic categories.

Our state-of-the-art R&D laboratory and production facilities are located in Montreal, Quebec. As one of the largest providers of generic single-source products, our Canada-wide customer base includes pharmacists, drug wholesalers and major retailers.

One of our core values at Pharmascience is to offer an unparalleled service to all of our customers. In June 2012, we received our Class A Operational Excellence certification for our commitment to providing superior standards in customer service. This successful project was based on the implementation methodology developed by Oliver Wight®, who are global leaders in business improvement processes.

As a result Pharmascience has been ranked #1 overall amongst all pharmaceutical companies at the 2012 Advantage survey.

We want to be your partner

And what makes us different?
Pharmascience distinguishes itself by providing you with an enriched customer experience adapted to your needs and a portfolio of high quality medicines trusted by patients worldwide.

With sales in more than 60 countries, we are the third largest generic pharmaceutical company in Canada by number of prescriptions, and the largest pharmaceutical employer in Quebec, Canada, with 1,300 employees. Our commitment to customer service coupled with our appreciation of the unique needs of the pharmaceutical marketplace distinguishes us from others in our field.

We go to great lengths to offer affordable, high quality prescription and non prescription drugs made to strict Canadian standards, and also educational programs, marketing and merchandising support designed to help pharmacists and other health-care professionals. We are committed to going above and beyond in order to be a true partner in your success.

"Our goal is to exceed our customers' expectations"
Pharmascience markets close to 340 families of pharmaceutical products in both prescription and non-prescription. We produce over 2,000 SKUs (stock keeping units) of innovative, as well as generic drugs in facilities that meet the highest industry standards and government regulations.

In order to fulfill pharmacists’ individual needs, our operations are flexible enough to handle large or small quantities. Not only do our turnaround times exceed the industry standard, many of our generic drugs in stock-keeping formats are exclusive to Pharmascience. We have worked diligently to streamline hundreds of internal processes in order to ensure you obtain the products you need, when you need them.

The results speak for themselves: last year alone, we were able to produce 2.1 billion tablets, 334 million capsules, and 374,000 liters of liquid medication.

Our main operations fall under two categories:

- **GENERIC RX**
- **PRIVATE LABEL OTC (NON PRESCRIPTION)**
A wide spectrum of product formats

**FORMATS:**
Capsules, pills, injectables, ophthalmic/otic, suspension, creams, liquids, patches, suppositories and innovative packages (blisters, bottles, boxes).

**70%**
Our products account for close to 70% of all generic molecules available in Canada.

**INNOVATIVE PACKAGES:**
- BLISTER
- BOTTLES
- BOXES

We also offer a variety of single source products such as half-dose medicine.

**PHARMASCIENCE ACTS AS:**
- A continuous investor and promoter of new generic molecules
- A modern Canadian company with a Montreal-based state-of-the-art factory
- A recognized leader among the industry for its quality products and customer service
Our Private Label OTC division offers competitively priced private-label products to all major Canadian drug-store retail chains, grocery store banners, as well as distributors.

Today, Pharmascience ranks as one of the fastest growing private-label manufacturers in the country. Our products are known for excellent quality, matching or surpassing national brands to become trusted alternatives for consumers.

Among our many “firsts” was the introduction of Naproxen 220 mg in early 2011, a mere 18 months after the launch of the brand-name equivalent Aleve® in Canada.
Social Responsibility

In order to address drug-shortage issues throughout the pharmaceutical industry, we have committed to continuous improvements in production capacity. We rank 60th among Canada’s top 100 R&D investors with more than $30 million invested annually.

In 2011, we invested more than $60 million to meet our customers’ growing needs, with our new plant in Montreal, creating new employment, and increasing our production capacity by 50%.

At Pharmascience, our aim is to be your partner in pharmaceuticals. Together, we can help build a healthcare system that will answer to the needs of Canadians.

Together, we can change the face of healthcare

$60M INVESTED
The founder of Pharmascience, Morris Goodman is a true leader in philanthropic initiatives.

In 2005, he created a foundation named The Rosalind and Morris Goodman Cancer Research Center which has made major charitable donations to various Montreal institutions such as The Stroke Unit at the Jewish General Hospital, the Agora at the Faculty of Pharmacy at the University of Montreal and to the Cancer Research Centre at McGill University, which has been renamed the Rosalind and Morris Goodman Cancer Centre.

Giving back to the community is a part of Pharmascience’s DNA. Not surprisingly, the company supports a wide array of non-profit groups in the Health and Education fields. In addition, Pharmascience donates over 1 million dollars a year in medicines to developing nations through Health Partners International Canada. At Pharmascience, it’s all about giving back.
